Positive Motivation and Hope during Addictive Diseases Treatment

Prim. MUDr. Karel Nešpor, CSc.

Introduction
Hope improves the results of treatments for many health problems (Wiles et al., 2008) including mental health problems (Werner, 2012, Stickley and Wright, 2011). It eases symptoms of depression, makes handling pain easier (Peerdeman et al., 2016) and improves quality of life. In case of addictive diseases, hope enables the patients to shift from the stage of hesitating to the stage of making a decision that leads to a positive change (more about stages of motivation in Czech language e.g. Nešpor, 2011). Treatment of addictive disease should be long-term and systematic, which means it requires great cooperation from the patient. Hope allows for better cooperation and motivates patients to undergo long-term aftercare (Corrigan, 2014).

Possible ways to strengthen hope during addictive disease treatment
- It is crucial to establish meetings with the long-term abstainers. For this purpose, there are self-help organizations such as Alcoholics Anonymous, or aftercare groups and sociotherapeutic clubs. Strengthening hope is not the only reason why these activities are useful. They also give patients a chance for social learning and gaining support from people in similar situation (so called peer support, Simpson et al., 2014). Participation in this type of self-help organization also makes them feel useful, strengthens their confidence and has a positive effect on their network of social relationships (Kelly et al., 2012).

- The therapist may use the experience of successfully treated addicts and tell the stories of anonymous abstainers, who were in similar situation as the patients and managed to cope with it.

- Hope is closely related to setting and achieving goals. Both extremes are unhealthy – whether its resignation or setting unrealistic goals. Large goals need to be separated into individual steps which will be gradually implemented. At the same time, it is important not to forget maintaining sobriety, good health and adequate rest. This approach helps the addicted patients to ease symptoms of depression and apparently facilitates abstinence (Raisian et al., 2010, Karimyar and Mosallanejad, 2014). When setting and achieving goals, it also helps to be flexible with respect to changes in patient’s possibilities and situation.

- In order to strengthen trust and hope, patients past achievements, abilities, intelligence etc. can be emphasized. It can also be useful to focus on the good options that the patient has.

- It has proven to be effective to ask one of the patients to do a presentation about an appropriate topic. For example, a cook can talk about how they prepared a cheap and healthy dinner. That is in accordance with the principles of the therapeutic community, which include active participation in own treatment as well as the treatment of others.
- Laughter and humor belong to the most pleasant ways to relax, calm down and strengthen hope. Of course the therapist must be delicate when using humor.

- Hope is also affected by therapist's non-verbal communication. For example a gloomy expression may be perceived by the patient as a negative prognosis, on the other hand, a smile can be perceived as a sign of confidence, which encourages hope.

- Motivation to stay sober and have hope can be increased even by small joys and healthy and pleasant forms of active rest. That includes relaxation techniques such as yoga, qigong, hiking and other safe forms of physical activity.

- An important factor, which raises hope, is social support from people around (Du et al., 2015). Having an addictive disease often has a negative impact on network of social relationships. Especially socially isolated patients are often advised to intensively cooperate with a self-help organization such as Alcoholics Anonymous or with a sociotherapeutic club.

- Hope and self-confidence can be strengthened even by mastering relevant skills, including social skills.

- Certain patients find their source of hope in spirituality, which is sometimes called „transcendent hope“.

**Conclusion**

Long-term cooperation, which is required for treatment of addictive diseases, is easier with hope. This article mentions some specific ways to strengthen hope.

General Conditions

- Before submission please make sure that your paper follows the guidelines for publishing in Cogmed Remediation Journal.
- Article/research paper should be submitted via a form on the Cognitive Remediation Journal website or via e-mail to cdzord@email.cz.
- Our journal is a quarterly.
- The length of the article/research paper is not limited. However, editors reserve the right to consult the length of the paper with its author.
- Editors shall not be liable for an abuse of copyright laws by a misuse of information to foreign entity.
- Editors accept articles/research papers that correspond with the topic of the Journal.
- Editors decide whether the article/research paper will be published.

Rules for publishing an article/research paper

- Author of published article/research paper does not receive a fee.
- Author guarantees that the text he provided is original. All coauthors should be included.
- Author declares that the version of submitted article/research paper is not being prepared for publication in another journal nor has it been already published in another journal.
- All rights belong to the author of the article/research paper.
- Author of the article/research paper is responsible for the accuracy of all content.
- Author should notify the editors when an identical article is being published elsewhere. This is considered an earnest condition for cooperation. Author should also inform that the article/research paper was already published in Cognitive Remediation Journal if he decides to publish it further elsewhere.
- Author will provide full contact information, not only an anonymous e-mail.
- Author agrees that publisher can make adequate editorial changes if needed.
- Author agrees that the editors will include the article/research paper in a journal issue of their choice and according to their consideration.
- Author accepts the standard process of publishing an article/research paper, which is as follows:
  - The article/research paper is published electronically in an online version of the Journal (PDF).
  - In some cases, if the article is successful, a printed version might be created.
  - An excerpt from the article might be posted on the Cognitive Remediation Journal website.
- The manuscript must be submitted electronically.
- By submitting an article/research paper the author agrees to the rules listed above.

Note: In some cases, individual conditions might be negotiated between the author and Cognitive Remediation Journal editors.
Recommended format of a research paper

Note: If the author is unable to fully comply with the guidelines, editors will provide a guidance and help.

- Text should be structured into chapters, sections and paragraphs
- Standard outline:
  - Title
  - Abstract or Summary
  - Introduction
  - Body of a paper
  - Conclusion
  - Appendices
  - Endnotes and footnotes
  - Bibliography and References

- At a reasonable rate, article may contain graphic attachments, figures and tables that support the text.

Text of the article/research paper and its graphic attachments must meet the following norms.

Technical norms for the text

- electronic version of the article/research paper should be submitted in MS Word format (.doc) or Rich Text Format (.rtf)
- article/research paper must be submitted via an electronic form on the Cognitive Remediation Journal website or via e-mail to cdzord@email.cz. If the size of the file exceeds 1.5 Mb it should be submitted via e-mail.
- Page size: A4
- Font type: Times New Roman
  - font size of the title: 14
  - font size of the chapters: 12
  - font size of the text: 10
- Structure:
  - Title
  - Abstract or Summary
  - Keywords
  - Text itself, figures and tables and other attachments
  - Bibliography and references
  - Citations (according to CSN ISO 690 norm)
